SUMMARY

Software Engineer with 2+ years of experience building .NET / Blazor applications for an enterprise healthcare claims platform, and founder of a full-stack mobile and web product (Flutter, Supabase, Stripe). Uses AI agent pipelines to accelerate delivery of tested, accessible features. Pursuing an M.S. in Computer Science at Georgia Tech.

EXPERIENCE

Associate Software Engineer *.NET 10, ASP.NET Core, C#, Blazor, SQL* Aug 2024 – Present
Cognizant – TriZetto Healthcare Products, QNX Modernization *Mesa, AZ*

- Designed, developed, tested, and deployed Blazor features integrated with REST APIs and DTO contracts for a platform supporting **~400K claims/day**, maintaining **85%+** xUnit test coverage.
- Built an AI agent pipeline that migrates legacy ASP.NET Web Forms screens to Blazor (.NET 10), automating **80–90%** of each migration given its APIs and DTOs, with generated code following shared SCSS, theming, and accessibility standards.
- Diagnosed Blazor Server's SignalR throughput limit (~4MB/s) as the bottleneck for **200MB+** uploads and shipped a JS interop workaround that cut upload time by up to **90%**, ahead of the platform's move to hybrid server/client rendering.
- Improved initial load time by **30%** through lazy loading, caching, and component refactoring.
- Resolved a data-layer defect end to end by tracing a non-sorting grid column from the UI to the SQL query and extending the API's allowed sort columns.
- Led ADA remediation for a QNX module, raising its WAVE score from **5** → **9.9** by restructuring page semantics, heading hierarchy, and ARIA usage, verified with NVDA.

Software Engineer Intern *.NET 8, C#, Blazor, Syncfusion* Jun 2023 – Aug 2023
Cognizant – TriZetto Healthcare Products, QNX Modernization *Mesa, AZ*

- Built the Blazor + Syncfusion proof of concept replicating core QNX workflows that leadership used to approve and fund the modernization initiative.

PROJECTS

Coachlink – Founder & Sole Engineer (Beta) *Flutter, Dart, Supabase (Postgres), Firebase Auth, Stripe, Vercel*

- Built and operate a platform connecting high school students with coaches and recruiters, shipping iOS/Android and web clients from a single Flutter codebase.
- Own the full stack: Postgres data model on Supabase, Firebase authentication, Stripe payment integration, and Vercel hosting and deployment.

IQity Brain Performance Report *React, TypeScript, Vue, Vite*

- Built a multi-section cognitive performance report UI and migrated it from React to Vue, re-establishing the build environment (PHP, Composer, NPM, Vite) with full feature parity.

EDUCATION

M.S. Computer Science (OMSCS), Georgia Institute of Technology *2026 – Present*

B.S. Computer Science, Arizona State University *2020 – 2024*
Summa Cum Laude • President's Scholar • Minor in Business

AWARDS

Raise the Bar Award (Cognizant, 2025) — Recognized for delivering key workflows for the HSC 2025 demo.

SKILLS

- Languages:** C#, TypeScript, JavaScript, Dart, SQL, HTML/CSS/SCSS
- Frameworks/Platforms:** .NET 10, ASP.NET Core, Blazor, Flutter, React, Supabase, Firebase, Stripe
- Tools/Methods:** Azure DevOps, Git, Postman, SSMS, xUnit, Vitest, Playwright, AI agents, Agile/Scrum
